Name: Maglalang, Sean Grei I.

Problem #1:

Item Description

Create a program that prints the following text:

```
Database Record
\\\\\\\\\\\\\\\\\\\\\\\\\\\\\\\\\
Name:        John Doe
Email:        john.doe@example.com
University:     ABC University
```

Sample Output 1

```
Database Record
\\\\\\\\\\\\\\\\\\\\\\\\\\\\\\\\\
Name:           John Doe
Email:          john.doe@example.com
University:     ABC University
```

Source Code:

```python
def escape_sequences():
    print("\n--- Escape Sequences ---")
    print("Database Record")

print("\\\\\\\\\\\\\\\\\\\\\\\\\\\\\\\\\\\\\\\\\\\\\\\\\\\\\\\\\\\\\\\\\\\\\\\
\\")
    print("Name:\t\tJohn Doe")
    print("Email:\t\tjohn.doe@example.com")
    print("University:\tABC University")
    print("----------------------------------\n")
```

Sample output:

```
--- Escape Sequences ---
Database Record
\\\\\\\\\\\\\\\\\\\\\\\\\\\\\\\\\\\\
Name:       John Doe
Email:      john.doe@example.com
University: ABC University
----------------------------------
```

Problem #2:

Item Description

Write a program that prints the output below:

```
Dear John, I hope this email finds you well.
I wanted to reach out and say hello.
I hope you are doing well and enjoying your day.
It's been a while since we last spoke, and I wanted to catch up with you.
Let's plan to meet up soon and have a great time together!
Subject: Greetings
Sender: Jane
Version: 1.2
Discount: 10.50%
Status: A
Code: ABCD123
Location: City XYZ
Age: 30
Company: ABC Corporation
Website: www.example.com
Phone: +1 123-456-7890
Job Title: Software Engineer
Department: Engineering
```

The program should use placeholders to present the information accurately.

Source Code:

```
def placeholders():
    print("\n--- Placeholders ---")
    subject = "Greetings"
    sender = "Jane"
    version = 1.2
    discount = 10.50
    status = "A"
    code = "ABCD123"
    location = "City XYZ"
    age = 30
    company = "ABC Corporation"
    website = "www.example.com"
    phone = "+1 123-456-7890"
    job_title = "Software Engineer"
    department = "Engineering"

    print("Dear John, I hope this email finds you well.")
    print("I wanted to reach out and say hello.")
```

```
    print("I hope you are doing well and enjoying your day.")
    print("It's been a while since we last spoke, and I wanted to catch up
with you.")
    print("Let's plan to meet up soon and have a great time together!\n")

    print("Subject: %s" % subject)
    print("Sender: %s" % sender)
    print("Version: %.1f" % version)
    print("Discount: %.2f%%" % discount)
    print("Status: %s" % status)
    print("Code: %s" % code)
    print("Location: %s" % location)
    print("Age: %d" % age)
    print("Company: %s" % company)
    print("Website: %s" % website)
    print("Phone: %s" % phone)
    print("Job Title: %s" % job_title)
    print("Department: %s" % department)
    print("----------------------------------\n")
```

Sample output:

```
--- Placeholders ---
Dear John, I hope this email finds you well.
I wanted to reach out and say hello.
I hope you are doing well and enjoying your day.
It's been a while since we last spoke, and I wanted to catch up with you.
Let's plan to meet up soon and have a great time together!

```

Problem #3:

Problem 3. Book Reservation; Accept User Input

Write a program that asks the user to enter the title of a book (string), the author (string), the year of publication (int), the genre (string), the library (string), the member ID (string) and the return date (string). Print the entered values directly. The output should look like:

```
You have successfully reserved the book [Title] by [Author].
Year of Publication: [Year]
Genre: [Genre]
Library: [Library]
Member ID: [MemberID]
Return Date: [ReturnDate]
```

Sample Output 1

```
Enter the book title: 1984
Enter the author: Orwell
Enter the year of publication: 1949
Enter the genre: Dystopian
Enter the library: Central
Enter your member ID: 12345
Enter the return date: 2023-07-10
You have successfully reserved the book '1984' by Orwell.
Year of Publication: 1949
Genre: Dystopian
Library: Central
Member ID: 12345
Return Date: 2023-07-10
```

Sample Output 2

```
Enter the book title: Mockingbird
Enter the author: Lee
Enter the year of publication: 1960
Enter the genre: Fiction
Enter the library: Westside
Enter your member ID: 67890
Enter the return date: 2023-06-20
You have successfully reserved the book 'Mockingbird' by Lee.
Year of Publication: 1960
Genre: Fiction
Library: Westside
Member ID: 67890
Return Date: 2023-06-20
```

Source Code:

```
def book_reservation():
    print("\n--- Book Reservation ---")
    title = input("Enter the book title: ")
    author = input("Enter the author: ")
    year = int(input("Enter the year of publication: "))
    genre = input("Enter the genre: ")
    library = input("Enter the library: ")
    member_id = input("Enter your member ID: ")
    return_date = input("Enter the return date: ")

    print(f"\nYou have successfully reserved the book '{title}' by 
{author}.")
    print("Year of Publication:", year)
    print("Genre:", genre)
```

```python
    print("Library:", library)
    print("Member ID:", member_id)
    print("Return Date:", return_date)
    print("----------------------------------\n")
```

Sample output:

```
--- Book Reservation ---
Enter the book title: cat
Enter the author: arthur nery
Enter the year of publication: 3211
Enter the genre: horror
Enter the library: pilipins
Enter your member ID: 12314
Enter the return date: 12/41/21

You have successfully reserved the book 'cat' by arthur nery.
Year of Publication: 3211
Genre: horror
Library: pilipins
Member ID: 12314
Return Date: 12/41/21
----------------------------------
```

Problem #4:

Problem 4. Day Identifier

Item Description

Write a program that takes an integer (1-7) as input and prints the corresponding day of the week based on the following conditions:

- If the input is 1, print `"Monday"`
- If the input is 2, print `"Tuesday"`
- If the input is 3, print `"Wednesday"`
- If the input is 4, print `"Thursday"`
- If the input is 5, print `"Friday"`
- If the input is 6, print `"Saturday"`
- If the input is 7, print `"Sunday"`
- If the input is any other value, print `"Invalid input"`

Sample Output 1

```
Enter day: 1
Monday
```

Sample Output 2

```
Enter day: 4
Thursday
```

Sample Output 3

```
Enter day: 5
Friday
```

Source Code:

```
def day_identifier():
    print("\n--- Day Identifier ---")
    day = int(input("Enter day: "))

    if day == 1:
        print("Monday")
    elif day == 2:
        print("Tuesday")
    elif day == 3:
        print("Wednesday")
    elif day == 4:
        print("Thursday")
    elif day == 5:
        print("Friday")
    elif day == 6:
        print("Saturday")
    elif day == 7:
        print("Sunday")
    else:
```

```
        print("Invalid input")
    print("----------------------------------\n")

while True:
    print("=== Midterm Lab Tasks ===")
    print("1. Escape Sequences")
    print("2. Placeholders")
    print("3. Book Reservation")
    print("4. Day Identifier")
    print("5. Exit")

    choice = input("Enter your choice (1-5): ")

    if choice == "1":
        escape_sequences()
    elif choice == "2":
        placeholders()
    elif choice == "3":
        book_reservation()
    elif choice == "4":
        day_identifier()
    elif choice == "5":
        print("Exiting program... Goodbye!")
        break
    else:
        print("Invalid choice. Please try again.\n")
```

Sample output:

```
--- Day Identifier ---
Enter day: 7
Sunday
----------------------------------
```
